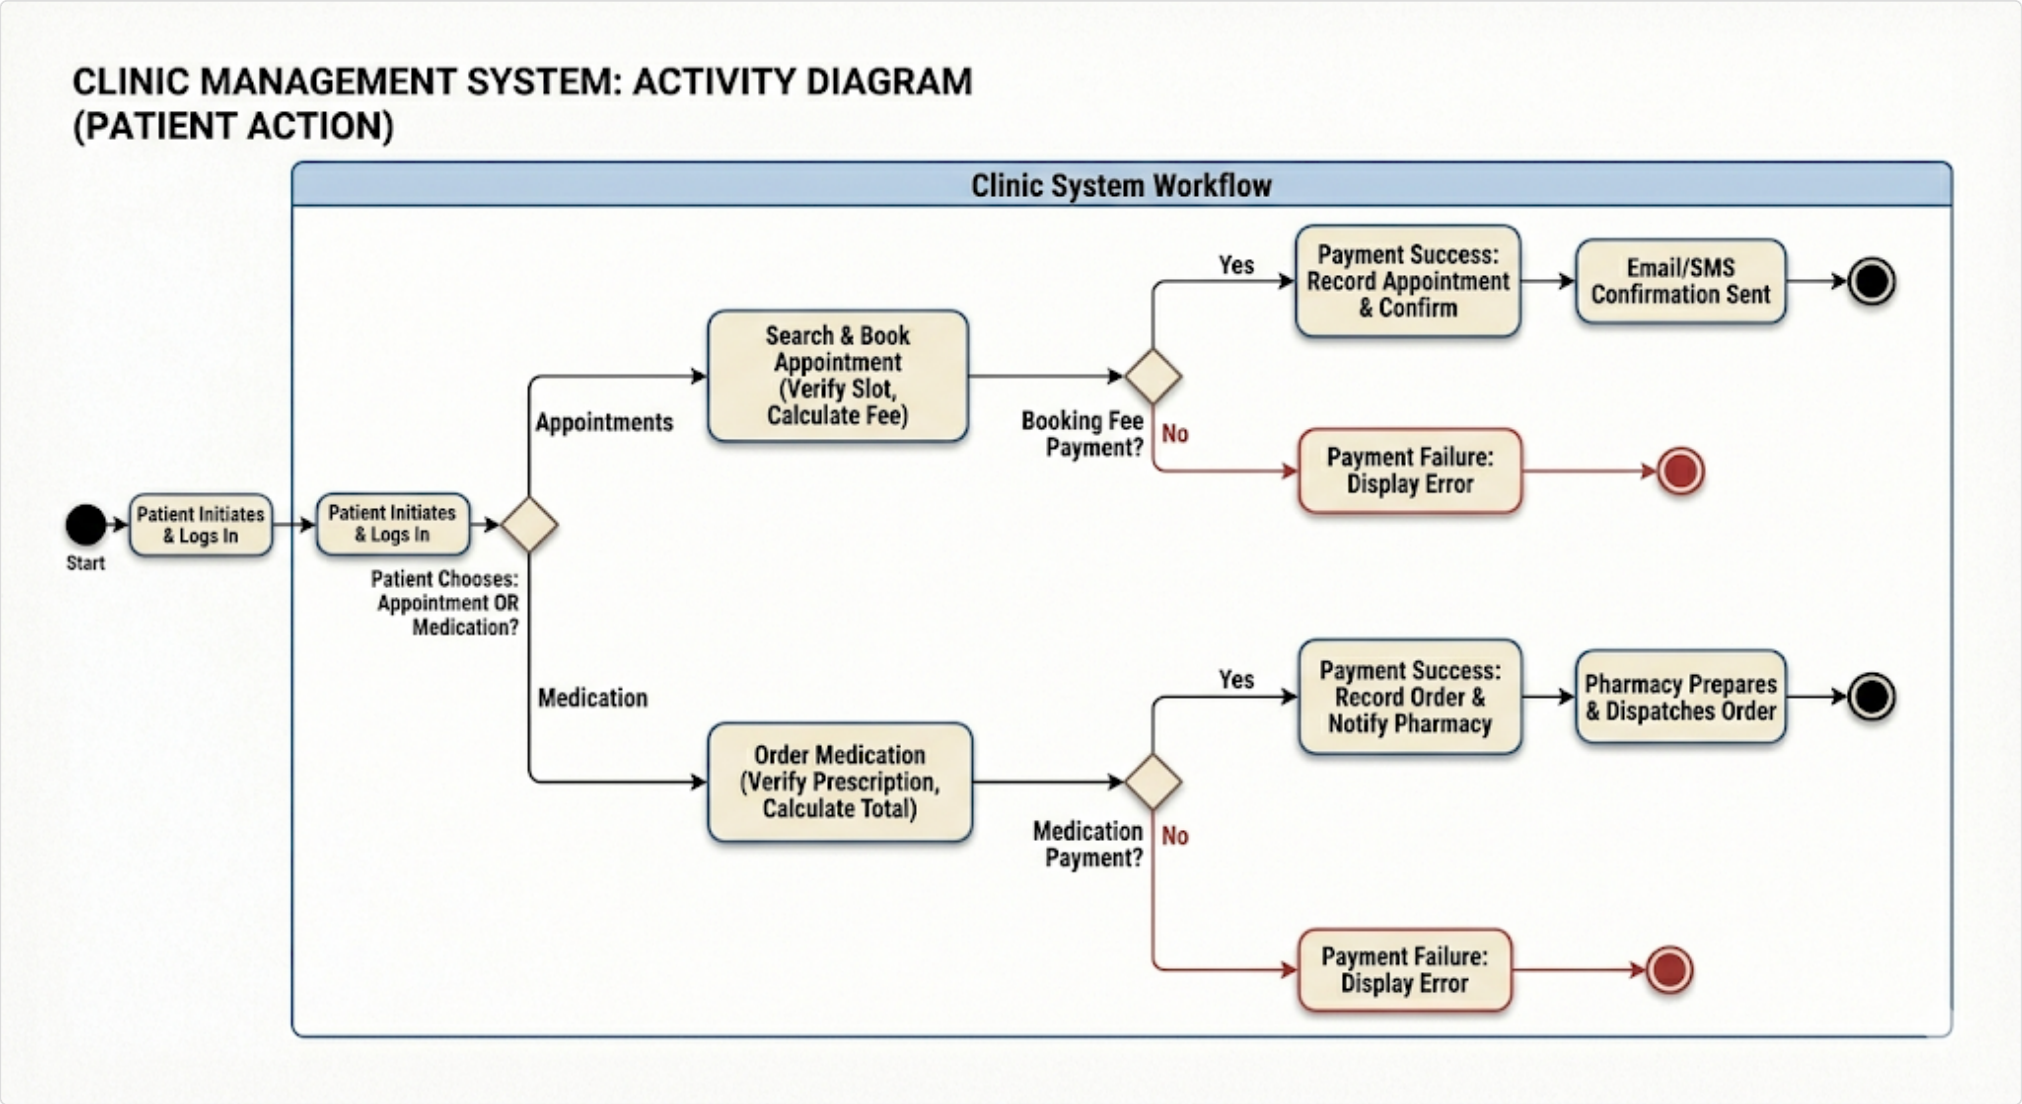
Clinic Management System: Activity Diagram



Process Description

This diagram illustrates the workflow for a clinic system, focusing on two primary patient activities: booking appointments and ordering medication.

- **Entry Point:** The process starts when a patient logs into the system.
- **Navigation:** The patient chooses between the **Appointments** path or the **Medication** path.
- **Appointment Path:** Includes searching for a slot, calculating fees, and processing the booking fee. A successful payment leads to a confirmed appointment and notification.
- **Medication Path:** Involves verifying prescriptions, calculating totals, and processing payment. Successful payment triggers pharmacy preparation and dispatch.
- **Error Handling:** Both paths include specific steps to handle payment failures and display errors to the user.
